Freefoam's unique colour Roofline Range with Colormax® technology

Freefoam is the colour specialist.

Freefoam manufacture one of the most technologically advanced self coloured PVC-U and PVC-UE roofline ranges using the unique patented Colormax® technology.

The ideal solution offering a range of seven standard colours, with guaranteed colour matched product range and colour-fastness.

- Architects
- Specifiers
- Contractors
- Installers
- Local Authorities and Housing Associations

The range is subject to **industry leading guarantees** of 50 years on white products* and 10 years on all other colours.

Most importantly for the commercial sector the Colormax® technology allows Freefoam to supply the range with **short lead times and minimal order quantities** with many colours being available straight from stock.

For larger projects Freefoam can colour match to specific shades or RAL equivalents. This service is subject to lead times and minimum order quantities.

*see www.freefoam.com for guarantee terms and conditions

Match to Windows, Doors and Conservatories

The trend away from white PVC continues year on year with homeowners using new coloured PVC windows, doors and conservatories to give their homes a completely new contemporary look. With a wide choice of colour options now available, grey and black being particularly popular.

The Freefoam Colormax roofline range offers installers and homeowners the opportunity to **match roofline to other external elements** to create a truly co-ordinated look.

Colour Window Trims

The Freefoam Colormax and Woodgrain range includes window accessories to ensure every new window installation can be finished with colour matched trim.

Colormax® - Unique to Freefoam

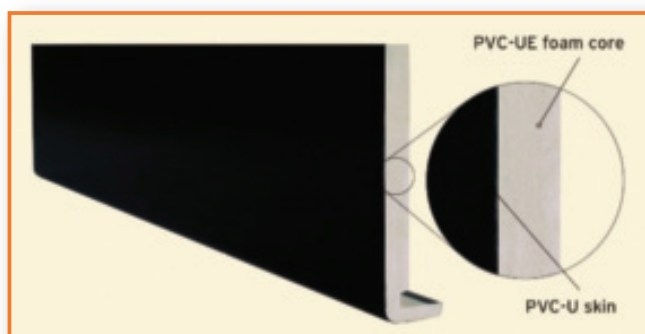

The innovative Colormax technology is unique to Freefoam.

THE TECHNOLOGY

Using a proprietary formulation that contains a unique selection of stabilisers and pigments specially chosen for their high colourfast properties, the Colormax® technology means Freefoam can confidently offer a wide range of colours.

THE PROCESS

Freefoam manufacture colour products using the **co-extrusion process**. A strong PVC-UE foam core is simultaneously co-extruded with a protective colour top coating of rigid PVC-U skin, creating a smooth, strong & hard wearing surface. A technically advanced master-batching process is used where a special blend of natural PVC compound is dosed on the extrusion line with specific concentrates of pigment.

RAL Numbers

RAL is a European colour matching system which defines colour shades for paint, coatings and plastics.

A single reference code allows specifiers, installers and homeowners to colour match different building elements.

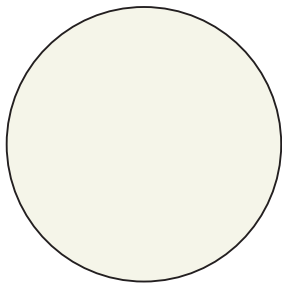

The majority of colours in the Freefoam range have a RAL equivalent. Listed alongside each colour.

The RAL numbers quoted are the nearest to our colours, however we cannot guarantee an exact match.

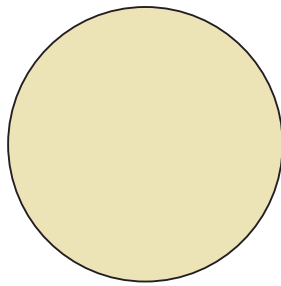

Colour Range

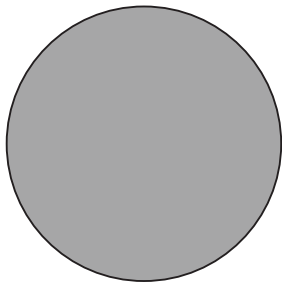

Freefoam use Colormax technology to manufacture fascia, soffit, fitting accessories and window trims in a range of seven colours.

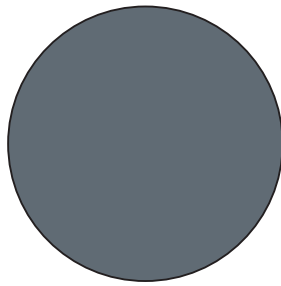

Pale Gold (PG)

Gutter Range

Freeflow, Freefoam's Round, Square, Ogee and Deep gutter range is available in a choice of colours.

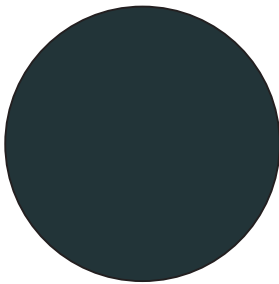

Freeflow®

Black

Leather Brown

Anthracite Grey

WHITE ON THE INSIDE TO REDUCE LEAKS

Each Freeflow gutter is co-extruded with a white interior and a range of exterior colours. This is Freefoam's innovative solution to the problems associated with rapid heat absorption and expansion of gutters.

A white surface exposed to sunshine can absorb heat and attain a surface temperature 10°C or more than the surrounding air temperature. But dark surfaces can absorb a further 30-40°C and exceed the softening point of the PVC.

By manufacturing gutter with a white interior the Freeflow range will absorb less heat and therefore reduce expansion and contraction to minimise leaks.

GUTTER MATCHED TO FASCIA AND SOFFIT

Freefoam manufacture both roofline and rainwater ranges using the same grade materials that are designed to fit and work together. This means that when you choose Freefoam gutter your fascia and soffit will be the perfect colour match.

Colour Fixings Range

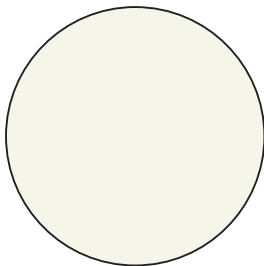

Plastops is Freefoam's range of colour-matched plastic-headed Pin and Nails. Available in a variety of sizes and colours to match fascia and soffit systems.

High Shock Absorption

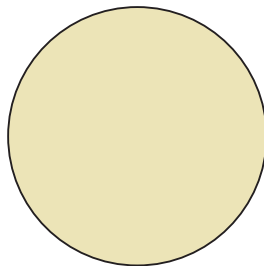

Colour plastic tops remain in place during fixing

Freefoam Colour Guarantee

FREEFOAM COLOUR ROOFLINE PRODUCTS ARE MANUFACTURED TO LAST.

Freefoam has made a commitment to producing and guaranteeing long-term PVC products.

COLOUR ROOFLINE PRODUCTS

10 Year Guarantee

Freefoam's range of coloured fascia, soffit & gutter products are eligible for a 10-Year Guarantee as standard. Products are guaranteed against a range of problems including warping, cracking, discolouring and blistering. Our coloured roofline products are backed by Freefoam's own innovative Colormax® system designed to give long lasting colour stability and product confidence.

WOODGRAIN ROOFLINE PRODUCTS

10 Year Guarantee

The Freefoam woodgrain range of fascia, soffit & fixing products is eligible for the standard 10-Year Guarantee. Our products are manufactured with market leading Renolit EXOFOL MX foil with built in sun protection from Solar Shield Technology (SST) to minimise profile temperature and expansion keeping your installations looking good year after year.

Marketing Support

Freefoam are committed to providing materials and sales support to make promoting and selling colour roofline products easy.

COLOUR SWATCHES

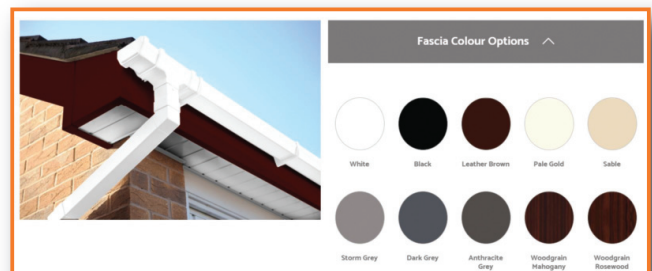

Handy swatches featuring the full colour and woodgrain ranges. Use to colour match roofline to windows, doors and other external features.

ROOFLINE VISUALISER

A fantastic online tool to help visualise different colour options of fascia, soffit and guttering range. Choose any combination of colours to plan your project.

Go to freefoam.com/Design Tools

Care & Installation

When handled, stored and installed correctly, coloured profiles will remain 'fit for purpose' throughout the guarantee period.

HANDLING & STORAGE

- ✓ Store products **internally**.
- ✓ Store in a **dry location away from direct sunlight**.
- ✓ Store with **protective sleeving**.
- ✓ Store **flat**.
- ✗ Do not store in metal containers, which can overheat and distort colour products.
- ✗ Never store coloured products externally or on top of vans for any length of time as heat distortion may occur.

INSTALLATION

- Freefoam recommends the use of Plastops colour plastic-headed pins and nails for the installation of colour roofline products. Fixing centres should never exceed 600mm for white profiles, 300mm for black profiles, and 400mm for other coloured and woodgrain profiles.
- Products should not be installed where ambient temperatures are likely to exceed 40 degrees Celsius, such as in close proximity to boiler flues or where

there is reflected or radiated solar or other sources of heat. They should only be installed when the external air temperature is between 0 and 30 degrees Celsius. The thermal movement that occurs between day and night, sun and cloud, winter and summer should be allowed for as described in the installation recommendations.

- Colour Hollow rigid products should be installed only in areas shaded from direct sunlight such as soffits, porch ceilings, internal cladding, etc. Colour hollow rigid profiles are not guaranteed for external cladding applications.
- Remove the protective film just before installation.
- General installation guidelines are outlined in our Technical & Specification Manual. Download from www.freefoam.com/documents

NOTES

- Colours shown are for identification only. Please see colour swatch or product samples for exact colour representation.
- All specifications, dimensions, descriptions and illustrations contained are intended merely to present a general idea of the goods that we sell.
- We reserve the right from time to time to make changes which are required to comply with any applicable safety or statutory requirements or which do not materially affect the quality or fitness for purpose of the goods you purchase from us.
